DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/2/2007 has been entered.

Response to Arguments

2. Applicant's arguments filed 11/2/2007 have been fully considered but they are not persuasive.

Applicant argues the '180 patent does not teach or suggest the first sheet P1 and the second sheet P2 are gripped by second roller pair 31 such that leading edges of the overlapped sheets P1 and P2 are shifted stepwise one after another. In response, the first sheet P1 and the second sheet P2 are gripped by second roller pair 32 such that leading edges of the overlapped sheets P1 and P2 are shifted stepwise one after another. Applicant further argues the area between D2 and D3 is a sheet conveying path g2... and is not an open area as claimed. In response, Applicant has not defined in the claims what the open area well enough to distinguish over the prior art of record. Path g2 is an open space that allows sheets to be conveyed.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 14,15,17-20,22-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Kawano USP 6,375,180.

Kawano discloses a sheet processing apparatus and method comprising a first roller pair (21), a second roller pair (32), a jogging tray (33), a guide channel between the first and second roller pair and formed by an upper guide plate (D2), a lower pivotally movable guide plate (D3), and an open area below the upper guide plate (fig.4), a controller (as shown in fig.5), a binding device (34), the second roller pair driven to rotate at a circumferential speed that is slower than that of the first roller pair (fig.24, C23/L7-12).

Allowable Subject Matter

5. Claims 16,21 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
